Tolling systems for light vehicles in Poland

Despite the fact that Poland has a distance-based tolling system, the technologies enabling tolling are **fragmented**:

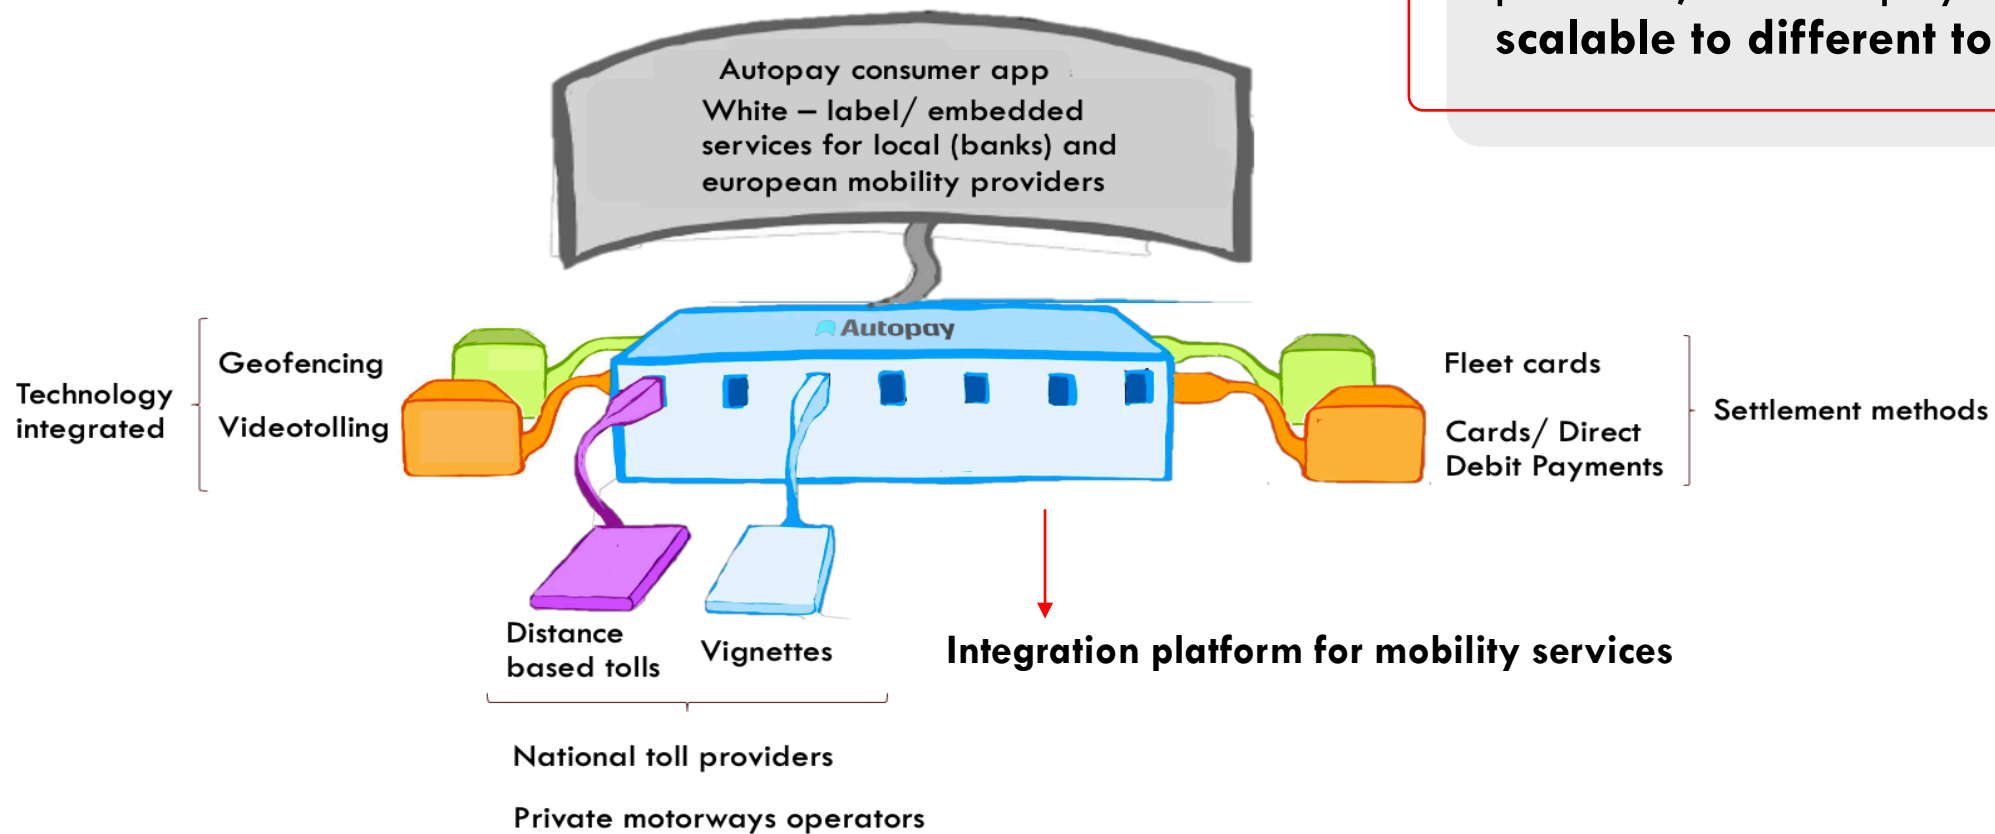

- **Videotolling (LPR camera recognition)** – Private Motorways (A1 Gdańsk – Toruń, A4 – Katowice – Kraków)
- **Geolocation/Pre-paid ticket** – Public Motorways (A2 Konin - Stryków, A4 Wrocław – Sośnica)
- **Manual payments** – Private Motorways (A2)

Autopay covers all sections of motorways in Poland that supports automatic toll payments to enhance the driver's experience across various technologies

How it works

By aggregating services into a single platform, the Autopay solution is **easily scalable to different tolling markets**

Autopay in numbers

100m

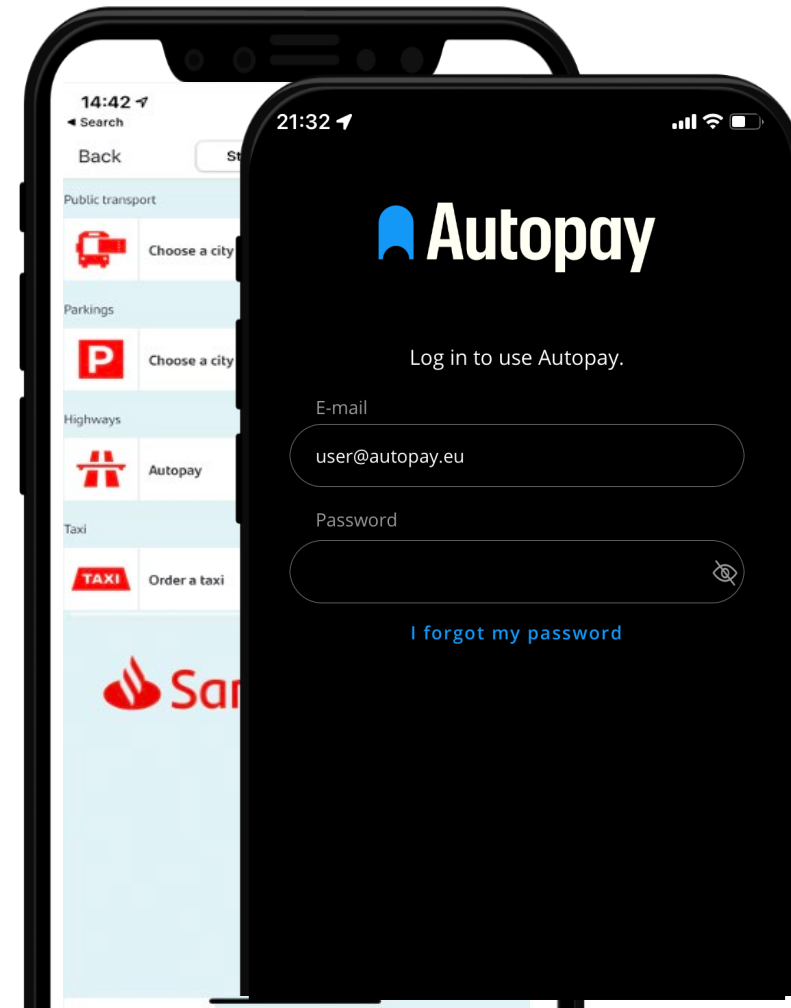

of tons less CO2 before the end
of 2025

2 000 000

of **drivers registered** with Autopay
services through Autopay consumer
app and local partners' platforms
(banks, fleet card issuers)

3s

average time of passage on
motorways with Autopay vs 45s with
standard payment methods

THANK YOU
